

- Sandwich plates for vertical grouping
- Choice of channels interconnection
- Selection of 3/4-16UNF, 7/8-14UNF cavities
- Connection patterns of clear opening of size 04, 06 (D02, D03) in accordance with ISO standards

The sandwich plates are used for assembly of built-in two way and tree way valves in hydraulic circuits. The cast iron sandwich plate allows mounting of one or two valves with 3/4-16-UNF thread, or in case of nominal inside diameter size 06 also with the 7/8-14-UNF thread. Through-way channels P, T, A, B in the vertical direction allow so called vertical grouping. By assembling the

sandwich plates with the valves in the vertical direction more complex hydraulic control circuits are created. Top sandwich plate is closed by a cover plate or by a valve with a body, I.g. directional control valve.

In the basic finish the sandwich plates are zinc coated.
